Fisher\n    :Donor: Michael Marshall (MARSHALL%PLU@io.arc.nasa.gov)\n    :Date: July, 1988\n\nThe famous Iris database, first used by Sir R.A. Fisher. The dataset is taken\nfrom Fisher\'s paper. Note that it\'s the same as in R, but not as in the UCI\nMachine Learning Repository, which has two wrong data points.\n\nThis is perhaps the best known database to be found in the\npattern recognition literature.  Fisher\'s paper is a classic in the field and\nis referenced frequently to this day.  (See Duda & Hart, for example.)  The\ndata set contains 3 classes of 50 instances each, where each class refers to a\ntype of iris plant.  One class is linearly separable from the other 2; the\nlatter are NOT linearly separable from each other.\n\n.. topic:: References\n\n   - Fisher, R.A. ```

centeroids of the clusters

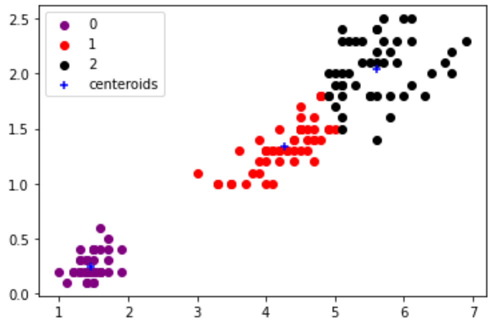
as this dataset range is limted so we don't need to use minmaxscaler as it makes the range from 0-1

```
km.cluster_centers_
```

```
array([[1.462     , 0.246     ],
       [4.26923077, 1.34230769],
       [5.59583333, 2.0375    ]])
```

```
plt.scatter(df1['petal length (cm)'],df1['petal width (cm)'],color='purple',label=0)
plt.scatter(df2['petal length (cm)'],df2['petal width (cm)'],color='red',label=1)
plt.scatter(df3['petal length (cm)'],df3['petal width (cm)'],color='black',label=2)
plt.scatter(km.cluster_centers_[:,0],km.cluster_centers_[:,1],color='blue',marker="+",label="centeroids")
plt.legend()
```

```
<matplotlib.legend.Legend at 0x7f92c301da90>
```



for representing elbow we use kmeans function called inertia_ that is used for sum of squared error or sse as it is require on the yaxis of graph and in x axis the number of cluster

```
df
```

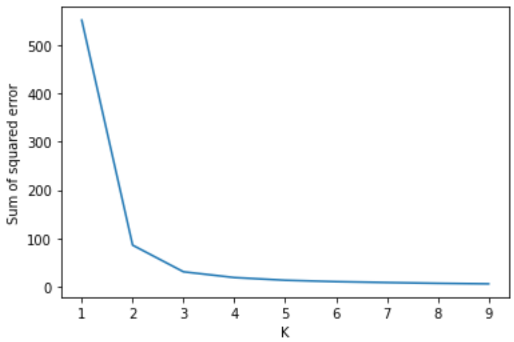
	petal length (cm)	petal width (cm)	clusters
0	1.4	0.2	0
1	1.4	0.2	0
2	1.3	0.2	0
3	1.5	0.2	0
4	1.4	0.2	0
...	...	...	...
145	5.2	2.3	2
146	5.0	1.9	2
147	5.2	2.0	2
148	5.4	2.3	2
149	5.1	1.8	2

150 rows × 3 columns

```
krange= range(1,10)
sse = []
for k in krange:
    km = KMeans(n_clusters=k)
    km.fit(df[["petal length (cm)",'petal width (cm)']])
    sse.append(km.inertia_)
```

```
plt.xlabel('K')
plt.ylabel('Sum of squared error')
plt.plot(krange,sse)
```

```
[<matplotlib.lines.Line2D at 0x7f92be7b5760>]
```



so from the above elbow we can see 3 is the optimum cluster for this dataset
